

CHECKLIST

Task	
<input checked="" type="checkbox"/>	Submit before 23:55, 14/11/2013
<input checked="" type="checkbox"/>	Based on Mobile jQuery
<input checked="" type="checkbox"/>	Present the user with an input box to filter the full list
<input checked="" type="checkbox"/>	Use your own customized theme (ThemeRoller is fine but feel free to do something yourself if you prefer)
<input checked="" type="checkbox"/>	Customize some of the default components, e.g. buttons, etc.
<input checked="" type="checkbox"/>	Clicking on any list item (regardless of whether it is in the full or the filtered list) should use some page transition to present a "page" with extra content specific to that item.
<input checked="" type="checkbox"/>	Use only one single HTML file for the main content and functionality
<input checked="" type="checkbox"/>	Assume that your app could be wired up to some server side data feed, but build it using mockup client side content (i.e. clearly indicate in your comments the portions of the code that you think should be dynamic if the app were using live data.
<input checked="" type="checkbox"/>	A collapsable side panel with some info about your app. e.g. usage instructions or something similar.
